

# Zibox-LT: connects with GPRS

- **ZiboxLT connects to Zenon in GPRS: this is a Real Time Machine to Machine communications. Compare to SMS solutions, thanks to GPRS:**
  - You don't pay international roaming : your car directly connects to your national operator
  - You don't pay each time you send / receive information to/from the car : your GSM operator provides you with a 5MBytes/Month subscription.
  - You get large more information from the car : around 800 exchanges per day per car: every event inside the car is monitored (smartcard, ignition, battery, button, ...)
  - Your car connects to Internet in Real Time. Information can't be lost as it is Real Time and Transactional.

with any  
GSM operator
