

Zibox-LT: Get Hands-Free Assistance

- **ZiboxLT enables the use of its integrated modem to receive voice assistance**

1. At any time, the Driver can “long press” the one-touch button (5 seconds or more)
2. This generates a Real-Time GPRS Alert to Zenon Server
3. Zenon server instantly forward this alert to the call center (name of Driver, car, ZiboxLT phone number...)
4. The call center calls back the Driver through ZiboxLT phone number to give him assistance: ZiboxLT automatically takes the call.

REAL TIME ALERT

HUMAN CALL-BACK

- *Thanks to ZiboxLT hands free audio (speaker and microphone) this call his ‘hands free’ and enables the Driver to get assistance while driving.*
- *As the call is “incoming”, no need to add a “vocal plan” to the GPRS M2M subscription to your local operator*
